Re: Programmer (req8071)

Dear Hiring Manager and committee:

I am writing to express my interest in Programmer position announced on University of Saskatchewan's Web site. More than 15 years of experience as a computer expert at Azad university in Iran helped me to strengthen my computer software, hardware, and network skills on a fast-paced IT team. I am specialized in developing and maintaining websites, configuring many different types of software and systems and successfully identifying and correcting software problems. Working as an IT and tech specialist and web developer for Atlas Office Solution, 1Maids, Best Buy and London Drugs gave me many opportunities to strengthen my technical knowledge as well as my communication and customer service skills. I obtained a Full Stack Java Developer certification from a Canadian institution called ComIT and a Leadership and Community Engagement certification through Saskatoon Open Door Society.

Attending the Software Developer Post-Graduate program at Saskpolytech, with a master's degree in Computer Engineering has equipped me with a variety of software and analytical skills for both back and front-end development such as Java and C# understanding for infrastructure, Javascript, Node.js and React for web development. Adding expertise in SQL and NoSQL databases, especially MySQL and MongoDB, has provided me with a more well-rounded skillset. Moreover, I have considerable software engineering knowledge including User Experience (UX) and User Interface (UI) design, Agile methodology and version control systems (GIT).

I believe my solid experience and extensive education have equipped me with both hands-on experience and software development knowledge that will make me a great asset to your team. I have enclosed my resume for review and look forward to meeting with you to discuss my qualifications further.

Sincerely,

Mohammad Jahanseir
